# I. GLOBAL ECONOMY

### Latest World Bank forecasts (November 2004) :

- ⇒ World economic growth: Forecasts for 2004 and 2005 are 5.0% and 4.3%, respectively.
  - **United States**: Growth momentum has slowed down from the second quarter. Growth is forecasted to be 4.3% in 2004.
  - Japan: While growth slowed sharply in the second quarter, the nearterm outlook remains solid. Growth is forecasted to be 4.3%.
  - **Euro area**: The pace of the expansion is expected to remain moderate, with growth forecast of 1.8%.
  - **East Asia**: Growth is expected to reach 7.1% in 2004. fixed investment has picked up not only in fast growing economies like China and Vietnam, but also in the middle and high income economies. Growth is expected to decelerate in 2005, although reaching a relatively robust pace near 6%.
- ⇒ Trade volume: Forecasts for 2004 and 2005 are 11.1% and 8.7%, respectively.

# **Asian Tigers and China: Economic Growth**

### China outperformed most Asian tigers during the first three quarters of 2004.

Sources: CEIC; Directorate General of Budget, Accounting, and Statistics.

## **II.1 DOMESTIC ECONOMY**

### 1. Economic Growth

Thanks to a pick-up in global economic growth, Taiwan's exports and private investment both grew significantly faster in 2004 than in the preceding year. Private consumption also posted steady growth, reflecting the boost to confidence generated by falling unemployment. While there are signs that the growth momentum has been softening in the second half of the year, preliminary estimates put the third-quarter growth rate at a robust 5.3%.

## **II.3 DOMESTIC ECONOMY**

#### 3. Domestic Investment

Thanks to the entrenchment of the global recovery and the resultant acceleration in private investment, total investment has been growing strongly in 2004. Having rebounded to positive growth in the first quarter of the year, it rose 19.4% in the second quarter, is estimated to have expanded 13.7% in the third quarter, and is expected to show an increase of 13.9% for the whole year.

### 6. PRICES

Wholesale prices increased 2.5% and consumer prices decreased 0.3% in 2003. Since the second quarter of 2004, prices rose more rapidly with the steep increase in energy prices. Wholesale prices and consumer prices rose 9.1% and 1.5%, respectively, in November 2004.

#### (2) Interest Rates

Market interest rates lowered continuously and reached historically low levels during end of 2002 and the third quarter of 2003. The downward trend leveled off since the last quarter of 2003, and has seen a reverse tendency more recently. In October 2004, commercial paper rate and interbank rate recorded 1.11% and 1.14%, respectively. Effective on October 1, the rediscount rate was raised from 1.375% to 1.625% by the Central Bank.

### 8. Business Monitoring Indicators

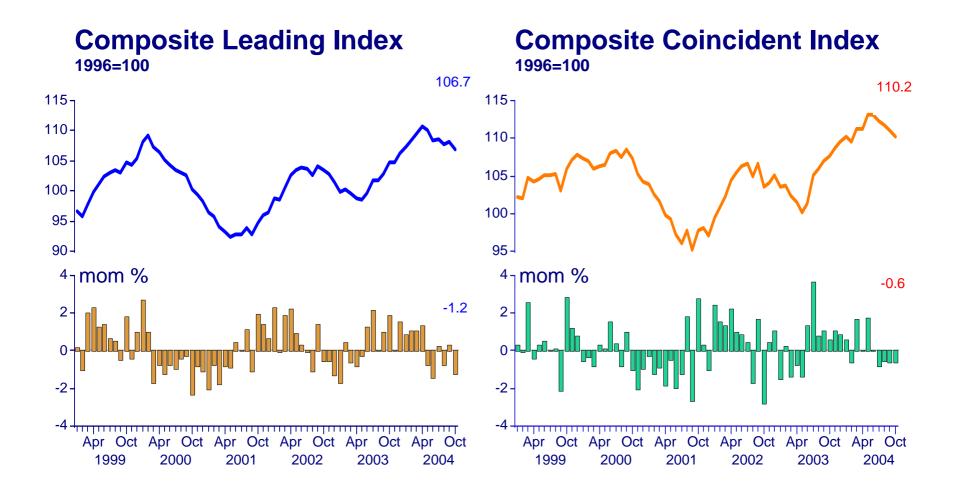

The monitoring indicators flashed the yellow-red light signaling racing economic expansion from December 2003 through September 2004, with the sole exception of May when they flashed the red overheating light. October saw a change to the green light signaling steady rather than rapid growth, though whether this indicates the onset of an easing trend remains to be observed.

### **Monitoring Indicators and Economic Growth**

# **II.8 DOMESTIC ECONOMY**

According to surveys conducted by the Council for Economic Planning and Development, the manufacturing firms kept optimistic for eleven consecutive months until April 2004. The percentage of pessimists surpassed that of optimists in five out of the six subsequent months in 2004.

### 1. Current Economic Issues

- ⇒ **Hiking oil prices** may contribute to upward pressure on domestic prices.
- The coming implementation of Kyoto Protocol is anticipated to greatly affect the iron and steel, petrochemical, cement, paper pulp and synthetic fiber industries, as Taiwan, though not a party to the pact yet, reduces carbon dioxide emissions.
- Dependence on exports to and investment in mainland China is rapidly increasing yet the development of a cross-straits communications and consultation mechanism is at a standstill. In addition, China's recent tightening measures to avoid a hard landing are anticipated to affect the Taiwan economy.
- ⇒ Fiscal deficits have expanded rapidly in the past decade, as it has become more difficult in raising fiscal revenues and contracting expenditures.

# **III.1 CURRENT ISSUES**

- ⇒ Inadequate infrastructure has been on the top list of impediments to Taiwan's competitiveness improvement by major competitiveness researchers.
- The banking sector reached very high levels of non-performing loan ratio, at 8.8% in the first quarter of 2002, with problems most severe among community financial institutions. Although domestic banks as a whole improved to 3.3% in September 2004, community financial institutions still saw a level of 11.6%.
- ⇒ The emerging imbalance in manpower development
  - The unemployment ate has risen from 3.0% in 2000 to around 5% in 2002.
    Although lowering to 4.3% in October 2004, it is still above historical level.
  - 2) There is a growing inadequacy in the supply of highly professional and specialized manpower, managers, and basic-skilled workforce.

- 1. Key Policy Initiatives
- ⇒ The inter-ministerial price monitoring taskforce met in September 2004 and announced measures to diminish fears of inflation:
  - 1) Switching from "loose" to "neutral" monetary policy, lowering tariffs on energy and consumer imports, and ensuring adequate supply of food.
  - 2) Public utility rate adjustment to be based on consumer affordability, economic situation, and business profitability.
  - 3) The petroleum industries are called upon to avert supply risks for the short run. For the long run, energy-saving technology and low energy-consuming, high value-added productions will be developed and promoted.
- A taskforce for climate change and the Kyoto Protocol is being organized to seek optimal solutions to meet both environmental and economic goals.
  - 1) Assistance will be provided to industries to voluntarily reduce carbon dioxide emissions.
  - Private business sectors will be encouraged to raise energy efficiency and emphasize green production process.

- ⇒ Easing restrictions on economic links with mainland China and monitoring recent economic developments in China
  - 1) The "no haste, be patient" mainland investment policy has been replaced with a less restrictive "proactive liberalization with effective management" approach.
  - 2) The preparatory phase of cross-strait direct transportation links is already underway.
  - 3) "Measures on cross-Strait freight facilitation" are to be announced at appropriate time.
  - 4) The government is closely monitoring China's tightening measures and their impact on the Chinese and Taiwanese economies.

#### ⇒ Fiscal reform

- 1) The government has established a fiscal reform committee to draw up plans for achieving a balanced budget within five to ten years.
- 2) Another committee has been formed to consolidate the management of stateowned properties to help relieve fiscal burden.

- Financial reform: The establishment of financial restructuring fund (RTC) and the passage of Financial Holding Company Law have helped liquidate and consolidate troubled financial institutions. As a result, domestic banks' non-performing loan ratio lowered to 3.3% in September 2004 from 8.3% three years ago, and community financial institutions; to 11.6%.from 17.9%. Moreover, a plan to develop Taiwan as a regional financial services center has been launched to help form a funding center, to promote asset management business, to develop a variety of new financial products, and to strengthen the health of the financial market.
- Infrastructural development A spending around US\$15 billion by the government plus US\$6 billion by private investment for the next five years has been launched to step up development in transportation, high-technology, higher education, cultural creativity, harbors, water resources and sewage management.
- Measures to increase employment: An increase of US\$215 million in public services spending has been extended to create about 40,000 jobs in public services in 2004. For the long run, the government is promoting services with high potentials in production value, job creation, valueadded, international competitiveness, and raising the quality of life. Among the list of such service industries are financial services, wholesale, retail, logistics/distribution/transportation, medical care, manpower training, tourism, cultural and creative, design, information, property management, R&D, environmental protection, and engineering consultancy.

### 3. Challenge 2008: Six-Year National Development Plan

- ⇒ The comprehensive six-year national development plan is designed to foster the creativity and talent Taiwan needs to transform itself into a "green silicon island."
- ⇒ Total expenditure under the plan will be NT2.6 trillion (approximately US\$75 billion.)
- $\Rightarrow$  The major goals of the plan are:
  - 1) To develop at least 15 products or technologies that rank among the world's best
  - 2) To double the number of foreign tourists visiting Taiwan
  - 3) To increase R&D expenditures to 3% of GDP
  - 4) To reduce the unemployment rate to less than 4%
  - 5) To boost the economic growth rate to over 5%
  - 6) To expand the number of broadband Internet users to over 6 million
  - 7) To create 700 thousand jobs

- ⇒ The plan includes three major reforms, of government, banking and public finance, and ten major investment areas as follows:
  - 1) Cultivate talent for the E-generation
  - 2) Develop the cultural creativity industry
  - 3) Develop an international base for R&D and innovation
  - 4) Develop high value-added industries
  - 5) Double the number of tourists visiting Taiwan
  - 6) Develop a digital Taiwan
  - 7) Develop Taiwan as an operations headquarters
  - 8) Improve the transportation infrastructure
  - 9) Conserve water resources and the ecology
  - 10) Construct new hometown communities

### **IV. PROSPECTS**

#### 2003

- ⇒ Taiwan's economy returned to positive growth in 2002, following its unprecedented contraction in 2001. The recovery was maintained in 2003, except for when an outbreak of SARS caused a temporary dip that pulled the second-quarter growth rate down to minus 0.1%. After the SARS epidemic had been contained, the economy picked up strongly in the second half of the year, thanks to rising optimism about the global economy and the emerging effect of increased government spending.
- $\Rightarrow$  The economy grew 3.3% in 2003 with consumer prices falling by 0.3%.

#### 2004

- ⇒ Exports are expected to continue posting double-digit growth in the last quarter of 2004, though at a somewhat more subdued pace than in the first three quarters.
- ⇒ The positive wealth effects created by the pepping-up of the stock and real estate markets helped bolster private consumption in the first half of the year. But consumer sentiment is expected to be more conservative through the year's second half under the impact of soaring oil prices, the expectation of interest rate rises, and the weakening of the stock market.
- ⇒ Private investment is expected to grow at a double-digit rate, driven by plant expansions in the opto-electronic and semiconductor industries and such large-scale projects as the high-speed railway and the 6th naphtha-cracker plant.
- $\Rightarrow$  Economic growth is expected to reach 5.9% with a moderate inflation of 1.8%.

#### 2005

- ⇒ Export trade is expected to cool off from exceptionally rapid growth to more sustainable levels following signs of weaker global expansion.
- ⇒ With domestic economic prospects remaining buoyant and forthcoming fiscal measures, the economic growth is targeted to be 5% with the CPI increasing no more than 2%.
